

Why Should You Switch To CI/CD

Why Should You Switch To CI/CD

No more launching buggy untested software products

This means:

- Less time taken by developers to troubleshoot the software after launch date.
- Lowering the development and debugging cost.

Why Should You Switch To CI/CD

No more security vulnerabilities in the software products

This means:

- Avoiding cost for fixing security issues.
- Having a better reputation.
- More customers trust the product, so increasing revenue.

Why Should You Switch To CI/CD

Faster software production, deployment and updates

This means:

- More happy customers with continuous fast software updates.
- Increasing the revenue.

Thank You
